

Wiener Mexicano — Vienna Lager by way of Mexico!

Perfect for Cinco de Mayo! A Vienna Lager by way of Mexico, Wiener Mexicano delivers a smooth drinking experience every time! Amber hues and a clean maltiness are hallmarks of this beer, which combines Vienna malt as a base with flaked maize and some specialty grains, with Spalt and Saaz hops. Salud!

BEER SPECS

Original Gravity: 1.048—1.051 Final Gravity: 1.011—1.013

IBU: 23 - 27

ABV%: 4.6% - 5.3% **Yield:** 5 Gallons

NOT INCLUDED IN KIT

Irish Moss (for clarity, optional)

Yeast

Bottle Caps (53 caps needed)

Priming Sugar (5oz or 3/4 cup)

USEFUL INFORMATION

Wort = unfermented beer

Rack = to transfer from one vessel to another

Pitch = to add yeast to the fermenter

OG = Original Gravity: Specific Gravity
Before Fermentation

FG = Final Gravity: Specific Gravity After Fermentation

._..

ABV = Alcohol by Volume

ABW = Alcohol by Weight

IBU = International Bittering Units

Alcohol by Volume Equation:

%ABW = (OG-FG) x 105 %ABV = ABW x 1.25

RECIPE DETAILS

6.6 lbs.	Light Liquid Malt Extract	FERMENTABLES
1 lb.	Vienna Malt	
1 lb.	Flaked Maize	
0.25 lb.	CaraMunich Malt	
0.20 lb.	Black Barley	SPECIALTY GRAINS
1.0 oz.	Spalt hops, added at the beginning of the 60 min boil	
1.0 tsp.	Irish moss (optional), added 20 min from the end of the boil	
1.0 oz.	Saaz hops, added 15 min from the end of the boil	
		BOIL SCHEDULE

YEAST SUGGESTIONS: Imperial Yeast IMPL09 Que Bueno, Lutra Kveik Dry Yeast, or Saflager 34/70 Dry Yeast

A recipe from our own Steve Kent, who did a deep dive into the style to create a unique and delicious beer!

EQUIPMENT

REQUIRED EQUIPMENT

- 3 gal or larger Brew Pot
- 6.5 gal Primary Fermenter
- Siphon Hose/Racking Cane
- Large Spoon or Paddle
- Air Lock
- Hydrometer
- Thermometer
- Cleanser
- Sanitizer
- Bottles or Kegging System

RECOMMENDED EQUIPMENT

- 7.5 gal Brew Pot
- Wort Chiller
- 5 gal Secondary Fermenter
- Thief
- Oxygen Cylinder
- Aeration Stone
- Auto Siphon

Included Muslin Bags

Grain = 1

Hop = 0

Brewing Instructions: Wiener Mexicano

PRIOR TO BREWING

- 1. Clean and Sanitize all equipment, tubing, etc.
- 2. If using Omega, Imperial Organic or White Labs liguid yeast, remove package(s) from fridge and let warm for 4-8 hours at room temperature. If using a Wyeast Activator pack, remove package(s) from fridge and 'smack' the pack to release the nutrients. Allow pack to swell for 4-8 hours at room temperature. If making a starter, prepare it 1 to 3 days before pitching.

BREWING DAY

- 1. Fill kettle with water and heat to 160F.
 - Partial boil method: fill kettle with as much water as possible while leaving room for grains, malt extract, and boil volume. Full boil method: fill kettle to approximately 6.5 gal water for a volume of 5 gal post-boil.
- 2. Rehydrate Irish moss In 1/2 cup warm water. Set aside (optional, for clarity).
- 3. Turn off burner (remove kettle from heating element if using an electric stove). Place crushed specialty grains in a muslin bag and soak in 150-155F water for 30 minutes. Remove bag, and allow remaining water in grains to drain into kettle. Do not squeeze the grains.
- 4. While stirring, add malt extracts until fully dissolved.
- 5. Turn the heat on and bring wort to a boil. WATCH OUT! Just before the boil, the wort rapidly rises.
- 6. Follow Boil Schedule on opposite page under 'Recipe Details'
- 7. At end of boil, chill wort as quickly as possible to 60-70F with a wort chiller or an ice bath (46 -54F if using a traditional lager yesst). Place lid on kettle while chilling.
- 8. Siphon or pour cooled wort into fermenter leaving as much sediment behind as possible:
 - Partial Boil: Add sterile water (packaged drinking water) to fermenter to reach 5.25
 - Full Boil: Siphon entire volume of wort into fermenter.
- 9. Aerate wort well by stirring, shaking or oxygenating.
- 10. Sanitize yeast package and use sanitized scissors to open package. Pitch yeast and attach airlock. If using a yeast starter, pitch entire contents of yeast starter into wort.
- 11. Move fermenter to a dark place with a steady temperature of 68-95F if using Lutra yeast, or 46-54F If using a traditional lager yeast.

FERMENTATION

We recommend a primary fermentation of two weeks at 64° - 95°F if using Lutra. A secondary fermentation can be used to improve clarity and reduce sedimentation, if desired. If using a traditional lager yeast like Que Bueno or 34/70, ferment at 46-54F during primary fermentation. Once the gravity has dropped 3/4ths of the way to the expected final gravity, raise the temperature of the beer by 10 degrees for 2-3 days until primary fermentation completes, then lager at 38-42F for 2-6 weeks. (Reference Final Gravity under 'Beer Specs'

BOTTLING

- Ensure there is no bubbling in the airlock, and that your beer has reached final gravity.
- Clean and sanitize all bottles, caps, bottling equipment and bottling bucket.
- Dissolve 3/4 cup (5 oz) priming sugar in 2 cups boiling water. Boil for 5 min then chill to 70-80F and add to bottling bucket.
- Siphon beer from fermenter into bottling bucket, being careful not to rouse up sediment on bottom of fermenter.
- 5. Stir thoroughly but gently to avoid introducing oxy-
- Using the bottle filler, fill bottles and cap them. 6.
- Store bottles at room temperature for 2 weeks or until carbonated

TIPS FOR SUCCESS

- 1. Clean AND Sanitize!
- 2. Avoid using softened water or Reverse Osmosis wa-
- 3. Make sure the specialty grains are loose inside the muslin bag to ensure water reaches the entire
- 4. Tie muslin bag to handle of kettle to prevent potential scorching on bottom of kettle.
- 5. Be sure not to exceed 155F while steeping grains to avoid unwanted flavors.
- 6. Turn off heat source and stir well while adding malt extract to avoid scorching on the bottom of the kettle.
- 7. Keep a spray bottle of water at hand to spray top of wort if it nears a boil over.
- 8. While racking, be sure not to introduce oxygen into your beer by splashing or shaking.
- 9. Maintain a constant temperature during fermentation.
- 10. Visit www.greatfermentations.com for more brewing tips and tricks.
